

Jason Dessen has lived what he would call a normal and rather ordinary life in the suburbs of Chicago with his wife and son. He wouldn't call his life extraordinary by any means, but he would definitely call it fulfilling. However, one night while running errands, his world shatters when he's unceremoniously kidnapped, driven to some unknown location, forced to undress, and then knocked unconscious.

When Jason wakes up, everything has changed. Suddenly he's a successful and rich genius, his wife is not his wife, his son was never born, and people he's never met or dreamed to be in the same circle with are calling him "friend" and vying for his attention.

But which life is real? The one of mediocrity with a wife and son he loves and misses, or the empty and lonely life of fame and fortune? And even if Jason can somehow figure out which is which, how can he make it back to the loving family he remembers from what could be a dream... especially if they were never real to begin with?

Dark Matter is such a mind-bending, action packed, dark thriller of a tale that keeps you reading because you just can't wait to see what happens next. Every twist and turn keeps you guessing and on the very edge of your seat until the whole tale merges into a fantastic twisted ending that makes you wonder what could possibly come next, and what else could be out there waiting! The book reads rather like a movie in the fact that every word and phrase was chosen to elicit specific images in the readers' minds. If you enjoyed movies like "Inception" and "The Matrix", you would probably enjoy this book!
